DETAILED ACTION

Allowable Subject Matter

1. Claims 1-21 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Applicant invention is drawn to an apparatus and method for performing both POTS testing and wideband testing of a subscriber's telephone line and any equipment connected thereto via a digital communication network without having to run a separate conductive test path in parallel with the digital communication network in order to facilitate such wideband testing. The telephony testing system that includes a digital measurement unit (DMU) operative for outputting a subscriber's telephone number, POTS test signals and wideband test control signals. The system also includes a digital communication network (DCN) including a remote terminal (RT). The test system also includes means for converting the subscriber's telephone number to a subscriber's telephone number signal, for outputting the subscriber's telephone number signal to the DCN, and for routing the POTS signals to the DCN. A digital wideband node (DWN) is coupled to the RT. The DCN conveys the subscriber's telephone number signal, the POTS test signals and the wideband test control signals to the DWN. The DWN routes the subscriber's telephone number signal received via the DCN to the RT whereupon the RT couples the corresponding subscriber's telephone line to the DWN via a test path. The DWN routes POTS test signals received via the DCN to the subscriber's telephone line via the test path. The DWN converts the wideband test control signals received via the DCN into wideband test signals which are conveyed to the subscriber's telephone line via the test path.

Prior art of record failed to teach or fairly suggest in combination the telephony testing system for performing both POTS testing and wideband testing of a subscriber's telephone line and any equipment connected thereto via a digital communication network without having to run a separate conductive test path in parallel with the digital communication network in order to facilitate such wideband testing as described in claim 1 and similar features as described in the method and apparatus claims 9, 16 and 18.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance".
